

GREEN CARD ECOSYSTEM

A self-explanatory guide to the producer–consumer network, showing what every participant, coordinator and administrator should be able to do on the website.

LEAP

LEARN TO EARN
AGRIBUSINESS
PLATFORM

One ecosystem. Two engines. One shared data layer.

The web app connects people, production, products, commerce, commissions and farm distributions.

PRODUCTION ENGINE

Group farms • slots • coordinators •
production cycles • revenue capture •
reinvestment • expansion into Gingertown
and Organic FoodNation

SHARED DATA LAYER

Member identity • Green Card number •
genealogy • wallets • transactions • farms •
product origin • audit trail • reporting

MARKET ENGINE

Mushroom Power welcome product • e-
commerce • monthly qualification • direct
retail reward • seven-level commissions •
withdrawals

Organic farming opportunities for everyone

Green Card is the gateway; LEAP is the operating platform; the producer–consumer network turns participation into measurable health and wealth activity.

01

ACCESS

Affordable digital membership and practical organic farming knowledge.

02

PRODUCE

Home, community and commercial group-farm participation.

03

CONSUME

Routine purchase of organic mushrooms and other organic foods.

04

MARKET

Members sell products and earn only from verified product sales.

05

SCALE

Seed-to-market services create jobs, food supply and GDP potential.

NORTH STAR: HEALTH + WEALTH + FOOD SECURITY

From seed to market, powered by participation and data

VISION

A food-secure and prosperous society where everyone can tap into opportunities in organic farming for better health, wealth creation and community resilience.

MISSION

Build a transparent LEAP-powered seed-to-market ecosystem that trains producers, organises group farms, aggregates organic foods, connects products to consumers and distributes verified value fairly.

AMBITION • A POTENTIAL ₦1 TRILLION GDP CONTRIBUTION

Rules the product must enforce—not merely display

REAL ECONOMY

Commissions arise only from verified product sales.

NO PASSIVE INVESTMENT

Farm participation is cooperative production facilitated by Agroheal.

ACTUAL PERFORMANCE

Farm distributions are based on recorded revenue/profit, not promises.

TRACEABILITY

Every naira and every farm allocation must have a transaction trail.

CONFIGURABILITY

Rates, thresholds and product commission pools are versioned admin settings.

LOCAL ORIGIN

Products carry farm, LGA and state provenance.

Green Card registration: ₦2,000 once

Registration activates identity, learning, community and referral tools—not the wealth-creation network.

ACCESS UNLOCKED

- 1 Dashboard
- 2 Named digital Green Card + number
- 3 Organic farming training library
- 4 WhatsApp + Telegram community links
- 5 Affiliate link + referrer/referral records
- 6 Links to production slots + 5×7 market network

System event: member.created → green_card.issued → referral_bonus.posted → access_grants.created

The member's single source of truth

IDENTITY

Name • Green Card no. • status
• join date

NETWORK

Referrer • referral link • direct
referrals • genealogy

COMMERCE

Orders • monthly spend •
qualification status

EARNINGS

Direct • levels • bonuses • farm
distributions • total

PRODUCTION

Slots • group farm • cycles •
allocations • reports

WALLET

Available • pending • held •
withdrawn • withdrawal action

LEARNING

Courses • materials •
completion

COMMUNITY

WhatsApp/Telegram links •
notices

Every figure must drill down to its source transactions

The ₦10,000 activation journey

CTA: “Join the Green Card Wealth Creation Team”. One payment activates both product participation and the compulsory first farm slot.

₦10,000

BASE PAYMENT

**₦5,000 — WELCOME
PRODUCT**

Mushroom Power. This side activates the producer–consumer marketing account and its configurable product commission pool.

₦5,000 — FARM SLOT

Compulsory first mushroom slot. Member may add multiple ₦5,000 slots during checkout or later.

Checkout must itemise both components before payment confirmation

A configurable ceiling, a transparent default

For the ₦5,000 Mushroom Power welcome product, the maximum compensation budget is 40% of verified sales value.

DESTINATION	RATE	VALUE ON ₦5,000
Direct retail	12.0%	₦600
Level 1	5.0%	₦250
Level 2	3.5%	₦175
Level 3	3.0%	₦150
Levels 4–7	2.5% each	₦125 each
Leadership pool	4.0%	₦200
Sustainability reserve	2.0%	₦100
Allocated total	39.5%	₦1,975
Ceiling	40.0%	₦2,000

0.5% UNALLOCATED BALANCE

The engine must not silently assume its destination. Admin config chooses whether it remains company margin, enters a reserve, or is reassigned—while the total never exceeds 40%.

PRODUCT-SPECIFIC RULE

For future products, admin enters the commissionable percentage and distribution schedule. Changes are versioned and apply prospectively to eligible transactions.

Seven levels of traceable sales relationships

The matrix controls placement and visibility; commissions still require verified qualifying product sales.

COMMISSION CONDITION

A member receives an eligible level reward only when a verified order creates commissionable value and all applicable qualification rules are met.

PLACEMENT RULES

Store sponsor and placement parent separately. Prevent cycles, duplicate identities and movement after locked commission activity except through audited admin correction.

¥5,000 personal qualifying volume per calendar month

A member remains earnings-eligible through personal purchase and/or verified retail customer sales of organic mushrooms and other qualifying organic foods.

Policy control: define how unqualified commissions are treated—held, forfeited or rolled forward—and display the rule before purchase.

Sell organic food with source-level transparency

PRODUCT CATALOGUE

Images • name • category •
description • pack size • price •
inventory • commissionable % •
active dates

ORIGIN & SUPPLY

State • LGA • group farm •
producer/coordinator •
available quantity •
harvest/batch information

ORDER & PAYMENT

Cart • nearest-source choice •
payment verification • receipt •
fulfilment status •
returns/cancellations

FUTURE DELIVERY

Integration-ready shipping
interface: address, geolocation,
delivery quote, provider,
tracking and proof of delivery

Never calculate commission until payment is verified and reversal rules are satisfied

Every ₦5,000 slot creates a production and accounting record

Farm-slot affiliate rule: ₦500 direct referral only. No multilevel commission is generated by a farm-slot purchase.

Allocation total = ₦5,000

Sponsor lineage determines the initial farm destination

The member is placed in the same group-farm account as the referrer, unless an authorised rule or admin decision provides otherwise.

EXCEPTION HANDLING

If the referrer has no active farm, send the member to a configurable holding queue and notify operations—do not create an orphan slot.

Months 1–3: prove production, then double capacity

Projected—not guaranteed—economics must be labelled clearly and later replaced by actual recorded outcomes.

2 BAGS

per ₦5,000 slot

Projected yield

2 kg fresh mushroom

Projected revenue

₦5,000 per slot

10% OF REVENUE

Company administration and farm support.

90% OF REVENUE

Reinvest to expand from 2 to 4 bags per slot, extend fruiting capacity and fund logistics/human resources.

SYSTEM OUTPUT

Cycle close captures actual bags, harvest, sales, costs and revenue; then posts allocations into visible, non-withdrawable farm ledger accounts.

Quarterly revenue waterfall after continuation cost

Illustrative projection: 4 bags × 1 kg × ₦2,500/kg = ₦10,000 revenue per slot.

STEP 2 • DISTRIBUTE ₦6,000 BALANCE		
Company	10%	₦600
Coordinator	10%	₦600
Farm owners	40%	₦2,400
Gingertown	20%	₦1,200
Organic FoodNation	20%	₦1,200

Percentages above apply to the ₦6,000 balance—not gross revenue.

Once Gingertown and Organic FoodNation are fully established

The admin records the effective transition date. New distribution rules apply prospectively to actual profits from all three farms.

One cycle-close form triggers a controlled allocation workflow

A ledger first; a balance second

Balances must be derived from immutable transactions, with reversals instead of edits.

PENDING

Awaiting settlement, qualification or return window.

AVAILABLE

Eligible and withdrawable earnings.

HELD

Blocked by policy, investigation or incomplete verification.

WITHDRAWN

Paid out with provider reference and timestamp.

MINIMUM WITHDRAWAL ₦2,000

Validate available balance → identity/payment details → request → payout
→ receipt → ledger posting

Instant means immediate initiation; final status must reflect payment-provider response

Entities the programmer should design explicitly

Use stable IDs, timestamps, status histories and effective-dated configuration.

MEMBER

identity • sponsor • placement

GREEN CARD

GOVERNANCE

Roles, approvals, effective dates and audit exports

Financial trust is a product feature

IDENTITY & ACCESS

Unique phone/email, secure authentication, role-based access, session controls.

PAYMENT INTEGRITY

Verify provider callbacks; idempotency keys; no duplicate credits.

LEDGER INTEGRITY

Double-entry or balanced sub-ledger; immutable postings; reversal transactions.

AUDITABILITY

Who changed what, when, why; retain configuration versions.

PRIVACY

Consent, protected personal data, minimal exposure of phone numbers.

CLAIMS & DISCLOSURES

Projected farm outcomes labelled; product health claims reviewed before publishing.

FRAUD CONTROLS

Duplicate accounts, self-referral, genealogy manipulation, suspicious withdrawals.

RESILIENCE

Backups, reconciliation, monitoring, incident recovery and exportable reports.

Turn transactions into operating insight

GROWTH

Withdrawals • reconciliation • dashboards • reports • fraud controls

PHASE 5

ECOSYSTEM SCALE

Delivery plugin • geolocation • APIs • advanced analytics • new value chains

The following slides explain exactly what the system should do

They turn the business rules into simple user actions, automatic system actions and clear records that the programmer can implement and test.

REGISTER → ACTIVATE → BUY → SELL → PRODUCE → DISTRIBUTE → WITHDRAW

Every step must create a visible result for the user and a traceable transaction for Agroheal.

What the website must do immediately after a person pays ₦2,000

This should be automatic. A new member should not need an administrator to activate ordinary Green Card benefits.

1. VERIFY PAYMENT

Confirm that payment succeeded and has not already been processed.

2. CREATE MEMBER

Save name, phone, email, location and a unique member account.

3. RECORD REFERRER

Save the owner of the affiliate link or referral code used.

4. SHARE THE FEE

Credit ₦1,000 to the referrer and record ₦1,000 as company administration.

5. ISSUE GREEN CARD

Generate a unique number and downloadable named card.

6. OPEN ACCESS

Activate the dashboard, training, community links and affiliate tools.

The system must distinguish membership, network activation and slot ownership

One person uses one profile, but the dashboard and permissions change as participation increases.

GREEN CARD MEMBER

Has paid ₦2,000. Can learn, join the community, refer new Green Card members and see links to other opportunities.

WEALTH CREATION MEMBER

Has paid the ₦10,000 activation fee. Receives Mushroom Power, owns at least one slot and joins the product sales network.

MULTIPLE-SLOT FARM OWNER

Has bought additional ₦5,000 farm slots. Farm allocations are multiplied by the number of eligible slots owned.

Status changes must be automatic after verified payment

The ₦10,000 payment must be clearly itemised before checkout

Only the Mushroom Power product side is part of the seven-level product commission calculation.

ITEM	DESCRIPTION	AMOUNT
Welcome product	1 × Mushroom Power	₦5,000
Compulsory farm participation	1 × mushroom production slot	₦5,000
Minimum activation payment		₦10,000
Optional additional slots	Whole number × ₦5,000	Added to total

AFTER PAYMENT

Create the product order, create all paid farm slots, activate the marketing account and send confirmations.

SEPARATE CALCULATIONS

Product commissions come from the ₦5,000 product. Farm-slot referral is a separate ₦500 direct payment only.

Recruitment alone must never create a seven-level commission

A commission begins only when an eligible product has been bought and its payment has been verified.

CUSTOMER ORDERS

A member or retail customer buys an eligible product.

PAYMENT IS VERIFIED

The system confirms successful payment.

POOL IS CALCULATED

Apply the product's active commissionable percentage.

BENEFICIARIES ARE FOUND

Find the direct seller and eligible uplines at Levels 1–7.

RULES ARE CHECKED

Confirm monthly qualification and other active conditions.

LEDGER IS CREDITED

Post a separate, traceable entry to each beneficiary.

The default structure allocates ₦1,975 and never exceeds the ₦2,000 ceiling

The remaining ₦25 follows the active administrative rule. The rule and its effective date must be saved.

PEOPLE IN THE SALES NETWORK

Direct retail seller	₦600
Level 1 upline	₦250
Level 2 upline	₦175
Level 3 upline	₦150
Levels 4, 5, 6 and 7	₦125 each

POOLS AND CONTROL TOTALS

Leadership pool	₦200
Sustainability reserve	₦100
Total allocated	₦1,975
Maximum allowed	₦2,000
Unallocated balance	₦25

₦5,000 PQV can come from personal purchases, retail sales or both

The dashboard should always show how much has been achieved and how much remains before the month closes.

EXAMPLE A — QUALIFIED

The member personally buys ₦5,000 of qualifying organic products. Monthly PQV = ₦5,000.

EXAMPLE B — QUALIFIED

The member buys ₦2,000 and makes ₦3,000 in verified qualifying retail sales. Total PQV = ₦5,000.

EXAMPLE C — NOT YET QUALIFIED

The member has ₦4,500 PQV. The dashboard shows that another ₦500 is needed.

The active policy must state whether commissions earned while unqualified are held, forfeited or released later.

A buyer should be able to choose food from a nearby source

The exact farm source must remain attached to every order line for traceability and reporting.

PRODUCT UPLOADED

Image, description, pack size, price, stock and commission setting.

SOURCE ADDED

State, local government area and group farm.

BUYER SEARCHES

Filter products and available locations.

BUYER SELECTS

Choose preferred or nearest available farm source.

ORDER RECORDED

Reserve stock and record the chosen source.

DELIVERY LATER

Delivery plugin quotes and fulfils last-mile delivery.

The coordinator needs one clear operating page for each farm

Every owner still has a personal view showing only their own slots, allocations and farm reports.

FARM DETAILS

Name • state • LGA • address • coordinator • status

MEMBER REGISTER

Name • phone • referrer • join date • chat onboarding

SLOT REGISTER

Slots per owner • payment date • active cycle

PRODUCTION

Bags • losses • harvest • yield • available stock

SALES

Quantity • price • buyer/order • revenue received

CYCLE ACCOUNT

Costs • continuation amount • distributable balance

ALLOCATIONS

Per slot • per member • company • coordinator • expansion

REPORTS

Daily updates • weekly reports • cycle statement • evidence

The order of calculation matters

First remove the ₦4,000 continuation amount. Then share the remaining ₦6,000 by the approved percentages.

₦10,000

projected cycle revenue

LESS ₦4,000

continued mushroom production

SHARE THE ₦6,000 BALANCE		
Company administration and support	10%	₦600
Group-farm coordinator	10%	₦600
Owners according to slots held	40%	₦2,400
Gingertown development	20%	₦1,200
Organic FoodNation development	20%	₦1,200

Total distributed = ₦6,000

Calculate the value per slot before calculating each owner's share

This ensures that someone with more eligible slots receives the correct multiple of the per-slot amount.

1. FIND OWNER POOL

40% of the ₦6,000 distributable balance is for farm owners. Owner pool = ₦2,400.

2. FIND VALUE PER SLOT

Divide ₦2,400 by eligible slots. If there are 10 slots, value per slot = ₦240.

3. CREDIT EACH OWNER

An owner with 3 eligible slots receives $3 \times ₦240 = ₦720$. Show this formula on the statement.

Actual cycle figures replace projections. A projection must never automatically become a guaranteed wallet credit.

Every wallet entry should explain where the money came from

The member should be able to open an entry and see its source, date, status and calculation.

ENTRY TYPE	SOURCE	VALUE
Green Card referral	Successful ₦2,000 registration	₦1,000
Farm-slot referral	Direct referral bought a slot	₦500
Direct product sale	Verified eligible customer order	Variable
Level commission	Eligible product sale in Levels 1–7	Variable
Farm-owner allocation	Approved farm cycle, based on slots	Variable
Withdrawal	Payout made to member	Debit
Reversal or correction	Linked to original entry and reason	Debit/Credit

Available balance = all available credits minus all posted debits

Never delete or silently overwrite a financial transaction

Keep the original record, reverse it and create the corrected record so the full history remains understandable.

ORIGINAL ENTRY

Keep the amount, date, beneficiary, source, calculation rule and approving user.

REVERSAL ENTRY

Create an equal and opposite entry linked to the original, with a clear reason.

CORRECT ENTRY

Post the corrected amount using the authorised rule and approval.

This is essential for trust, reconciliation and auditing

Use these meanings throughout the website and training materials

The same word should mean the same thing on every page, report, statement and notification.

GREEN CARD

The member's basic entry into the Agroheal ecosystem.

LEAP

The Learn-to-Earn Agribusiness Platform where learning, production and marketing are managed.

PQV

The value of eligible personal purchases and retail sales counted for monthly qualification.

REFERRER

The member whose affiliate link or referral code introduced a new participant.

UPLINE

Members above a participant in the seven-level marketing structure.

FARM SLOT

A ₦5,000 unit of participation in mushroom production.

CYCLE

The agreed production and accounting period for a farm.

WALLET

The record of money credited, held, withdrawn, reversed or adjusted.

The website should guide the member from registration to earnings

Each step should have a clear button, plain explanation, confirmation message and visible record.

1. REGISTER

Pay ₦2,000 and receive Green Card access.

2. LEARN

Open organic farming training and community links.

3. REFER

Share a personal link and see successful referrals.

4. ACTIVATE

Pay at least ₦10,000 to receive Mushroom Power and one slot.

5. BUY OR SELL

Build monthly PQV through eligible products.

6. FOLLOW FARM

See group farm, coordinator, cycle and reports.

7. SEE EARNINGS

View product commissions and farm allocations separately.

8. WITHDRAW

Request payment when available balance reaches ₦2,000.

The home dashboard should answer the member's most important questions

The language should describe real activity. Avoid technical database or accounting words on ordinary member pages.

MY MEMBERSHIP

What is my Green Card number?

Who referred me?

What benefits can I access?

Am I a Wealth Creation Team member?

MY ACTIVITY

How much have I bought this month?

Have I reached ₦5,000 PQV?

How many referrals and farm slots do I have?

What is happening on my farm?

MY MONEY

What have I earned from referrals, products and farms?

What is pending, held or available?

Can I withdraw now?

Where did each amount come from?

The coordinator should see only the farms assigned to him or her

The coordinator's work area should make daily member support, production reporting and cycle closing straightforward.

MEMBERS TO CONTACT

New payments, phone numbers and people not yet added to the farm chat.

SLOTS AND OWNERS

Who owns each slot and which production cycle it belongs to.

PRODUCTION UPDATE

Bags prepared, colonised, moved, fruited, lost and harvested.

SALES UPDATE

Quantity sold, selling price, customer/order and money received.

DAILY AND WEEKLY REPORTS

Messages, photographs, documents and farm progress shared with owners.

CYCLE CLOSE

Enter final actual figures, attach evidence and submit for approval.

The administrator needs business controls, not access to rewrite history

Every change to a money rule should have a starting date, approving user and permanent change record.

MEMBERS AND ROLES

Review accounts, assign permissions and resolve verified identity problems.

PRODUCTS AND SOURCES

Upload products, prices, stock, farm origin and product commission rules.

NETWORK RULES

Set direct and level percentages without exceeding the approved ceiling.

FARMS AND COORDINATORS

Create farms, appoint coordinators and handle unassigned members.

CYCLE DISTRIBUTION

Set continuation and sharing rules, review and approve cycle close.

QUALIFICATION

Set monthly PQV and treatment of earnings while a member is unqualified.

WITHDRAWALS

Set minimum amount, payment method, limits and exception checks.

REPORTS AND AUDIT

See totals, reconcile payments and export complete transaction history.

Important actions should produce immediate, understandable notifications

Messages may be delivered inside the dashboard and through available email, SMS or messaging integrations.

REGISTRATION SUCCESS

Your payment is confirmed.
Your Green Card number is ...

REFERRAL CREDIT

₦1,000 has been credited
because ... completed Green
Card registration.

ACTIVATION SUCCESS

Your Mushroom Power order
and ... mushroom slot(s) have
been created.

FARM ASSIGNMENT

You have been assigned to ...
Group Farm. Please contact
your referrer/coordinator.

PQV PROGRESS

You have achieved ₦... of the
₦5,000 monthly requirement.

COMMISSION CREDIT

₦... was credited from verified
order ... as direct/Level ...
commission.

CYCLE POSTED

Your farm cycle has closed.
Your ... slots received ₦...
according to the attached
calculation.

WITHDRAWAL UPDATE

Your ₦... withdrawal is
pending/successful/failed.
Reference: ...

The website must remain accurate when ordinary steps cannot be completed

Do not leave the member uncertain or create incomplete financial records.

PAYMENT PENDING

Do not create final benefits until payment is confirmed. Show the pending status.

DUPLICATE PAYMENT NOTICE

Process a verified payment only once, even if the provider sends the message again.

NO VALID REFERRER

Apply the approved company or holding rule and place the case in an admin queue.

REFERRER HAS NO FARM

Place the new slot in the farm-assignment queue and notify operations.

PRODUCT OUT OF STOCK

Prevent payment or offer an approved alternative source before checkout.

ORDER CANCELLED

Reverse inventory and any commissions according to the active cancellation rule.

UNQUALIFIED MEMBER

Follow the displayed rule for holding, forfeiting or later releasing commissions.

FAILED WITHDRAWAL

Return funds to available balance only after the payment failure is confirmed.

The programmer should make these rules configurable instead of guessing

The website can be built before every answer is final, provided the administrator can enter and change approved rules prospectively.

UNALLOCATED 0.5%

Where should the ₦25 balance on a ₦5,000 default product sale go?

UNQUALIFIED EARNINGS

Should they be held, forfeited or released after later qualification?

MATRIX PLACEMENT

What exact rule chooses placement when a sponsor already has five direct positions?

REFUNDS AND RETURNS

At what point are product commissions final, and how are reversals handled?

FARM TRANSFER

When may a member or slot move from one group farm to another?

CYCLE APPROVAL

Which role must approve figures before allocations reach wallets?

WITHDRAWAL DETAILS

Which bank/payment provider, fees, daily limits and identity checks apply?

FULL ESTABLISHMENT

Who declares Gingertown and Organic FoodNation fully established, and on what date?

The first release is ready only when these complete journeys work correctly

Each journey should be tested with successful, failed, reversed and repeated transactions.

- 1 A person registers, receives a named Green Card and the referrer receives exactly ₦1,000.
- 2 A member activates with ₦10,000, receives a product order and one farm slot without mixing their commission rules.
- 3 An eligible product order creates the correct direct and Level 1–7 entries under the active rule version.
- 4 Monthly PQV is calculated from the correct eligible transactions and visibly changes qualification status.
- 5 A slot owner appears in the correct group farm and the coordinator receives contact/onboarding information.
- 6 An approved farm cycle distributes actual figures correctly by the number of eligible slots.
- 7 A member can trace every wallet entry to its source and withdraw once available earnings reach ₦2,000.
- 8 **Administrators can reconcile payments, orders, commissions, farm allocations and withdrawals without changing posted history.**

A trustworthy operating system for the Green Card Ecosystem

Members can learn, buy, sell, produce and withdraw. Coordinators can run farms and close cycles. Admin can configure the model without code changes. Every allocation can be traced back to a verified transaction or approved farm result.

BUILD FOR TRANSPARENCY • CONFIGURE FOR GROWTH • MEASURE REAL VALUE
